Welcome to the Sandwatch International Database!

The database was launched in Mauritius on 20th March 2013. The database will provide participating Sandwatch groups the opportunity to upload their monitoring data to a secure site. Not only will this allow for proper archiving of environmental data, but it will also allow users to analyse their results, create their own charts and graphs, and communicate their findings visually with the wider community. Non-Sandwatch groups can also visit the site and view the data.

For anyone to access the database, you will need a user name and password. Please [click here](http://www.sandwatch.ca/index.php?option=com_content&view=article&id=3&Itemid=8) (link this to website http://www.sandwatch.ca/index.php?option=com_content&view=article&id=3&Itemid=8) to find out how to get a user name and password.

If you have any questions or comments about the database, or if you have forgotten your password please send an email to sandwatchdatabase@gmail.com

WHY HAVE A DATABASE?

The database provides a:

- Teaching environment, where students can analyse their results, create graphs and tables, save photos, improve mathematical and computer skills
- Sharing environment where students and users can see data from other countries and regions and compare it with their own
- Archiving environment: the database provides a safe and secure place to store the data
